### Clinton County Reports Second Case of West Nile Virus

**Clinton County, October 8, 2024.** The Clinton County Health Department (CCHD) today is reporting an additional case of West Nile virus, the second case reported this season in Clinton County.

The individual, who is under the age of 50 and resides in Plattsburgh, began experiencing symptoms consistent with West Nile virus on September 18, and was subsequently hospitalized. They are now recovering.

“Our second resident to test positive for West Nile virus should be a reminder to our residents that mosquitoes can transmit viruses to people and animals,” explained Nichole Louis, Director of Health Care Services at CCHD. “Preventing bites is the best way for residents to take action. Protect yourself and your family by covering your body with clothing and EPA-registered repellants, keeping working screens in your home’s windows and doors and eliminating standing water around your home.”

In Clinton County, the mosquito-borne illnesses of concern are Eastern Equine Encephalitis (EEE, Triple E) and West Nile virus (WNV). Both EEE and WNV are transmitted to humans by the bite of an infected mosquito. Clinton County has now confirmed two (2) cases of WNV in residents and one (1) case of EEE case identified in a horse. No human cases of EEE have been identified in Clinton County.

Most people infected with EEE or WNV develop mild symptoms or do not develop any signs or symptoms. If illness develops, symptoms usually occur 3-15 days after the bite from an infected mosquito. Symptoms of EEE and WNV can be similar, but EEE is a much more serious illness in people who develop severe disease and much more likely to result in death. People with mild cases of mosquito-borne illness may develop fever, headache, body aches and occasionally a skin rash or swollen glands (lymph nodes). People with severe cases of EEE or WNV usually have a sudden onset of headache, high fever, neck stiffness, muscle weakness, altered mental status, tremors, convulsions, paralysis, inflammation of the brain (encephalitis) or the membranes of the brain and spinal cord (meningitis) or coma.

Individuals under the age of 15, over 50 years of age and those with chronic illness or compromised immune systems are at most risk for severe infection. Clinton County residents are urged to take precautions to avoid being bitten by mosquitoes, especially during mosquito season, which extends through November.

Take the following steps to protect yourself:

- Cover your skin as completely as possible when outside when mosquitoes are present and active. Wear long sleeves, pants and socks.
- Use insect repellent containing DEET, Picaridin, Oil of Lemon Eucalyptus, or IR3535 and follow label directions. Do not apply repellent directly on children; instead apply it to your own hands and

“Persons who have any physical mobility or other needs, call the telephone number above to arrange for accommodations”

then rub it onto your child. Avoid applying to your face and wash your skin and clothing thoroughly after coming indoors.

- Make sure there are screens in your home’s windows and doors. Make sure the screens are free of rips, tears and holes.
- Eliminate all standing water on or around your home and property where mosquitoes can breed. Make sure your roof gutters drain correctly and clean clogged gutters in the spring and fall. Remove or turn over any items that may hold stagnant water, such as tires, buckets, planters, toys, pools, birdbaths, flowerpots, or trash containers to prevent mosquitoes from breeding. Clear vegetation and waste from the edge of ponds.

“CCHD and Clinton County Soil & Water Conservation District continue to offer free mosquito dunks to county residents,” added Ms. Louis.

These mosquito dunks offer an effective method for controlling mosquito populations by preventing mosquito larvae from developing into adult mosquitoes. They are non-chemical and are also effective against blackfly larvae, making them safe for use in backyard ponds, fountains, and other water features where fish, frogs, tadpoles, and other aquatic life reside. More information on these dunks can be found at <https://www.health.ny.gov/publications/13035.pdf>.

Mosquito dunks will be available for distribution at the following locations and times:

Clinton County Health Department  
133 Margaret Street, Plattsburgh  
Monday through Friday, 8:00 a.m. to 4:00 p.m.

Clinton County Soil & Water Conservation District  
6064 Route 22, Suite 1, Plattsburgh  
Monday through Friday, 8:00 a.m. to 4:30 p.m.

They are free for all Clinton County residents on a first-come, first-served basis while supplies last.

For more information on mosquito-borne illnesses, please call CCHD at 518-565-4848 or visit:
